VIMS Shoreline Permit Application Report # 02-2242

APPLICANT: CAROLYN G. DAY
Immediate Waterway: Dividing Creek
Locality: NORTHUMBERLAND COUNTY
Purpose: Shoreline Stabilization
Application Type: Subaqueous
Site Inspection: 11/22/02
Report Date: 12/20/02

NOTICE

The Virginia Institute of Marine Science (VIMS) is aware that regulatory or administrative bodies who weigh the overall potential public and private benefits and detriments in arriving at decisions must also consider other factors such as economics, aesthetics, zoning, or community desires. INFORMATION PROVIDED IN THIS REPORT IS, THEREFORE, ONLY THE ENVIRONMENTAL AND MARINE RESOURCES INPUT INTO THE DECISION MAKING PROCESS.

This assessment is based on biological, chemical, geological, and physical factors affecting the marine environment at and in the vicinity of the proposed activity. Parameters of the marine environment which may influence recreational, commercial, or industrial activities which are dependent on the marine environment are also considered where applicable.

Comments:

We have reviewed this proposal from a marine environmental viewpoint. A revetment is proposed to stabilize a failing bulkhead. The individual and cumulative adverse impacts resulting from this activity will be minimal if the revetment is constructed as proposed.

Karen A. Duhring
Marine Scientist
Hydrologic units represent smaller, isolated watersheds defined by topography and flow direction. These units can be thought of as insulated ecosystems or landscapes within which resources can be managed at a larger scale. The cumulative impact of a project to resources within a hydrologic unit may be significantly greater than the impact to the larger watershed above.
Permit Site Study Area

Northumberland County
NORTHERN NECK BAYSHORE
Dividing Creek

Open water
Intertidal flat
Roads
