VIMS Shoreline Permit Application Report # 03-0168

APPLICANT: ROBERT W. CROWN
Immediate Waterway: Hampton Hall Creek
Locality: WESTMORELAND COUNTY
Purpose: Erosion Control
Application Type: Wetlands
Site Inspection: 3/7/03
Report Date: 3/12/03

Project Location
Westmoreland County
ANNOUNCEMENT

Information provided in this report is only the environmental and marine resources input into the decision making process and is based on biological, chemical, geological, and physical factors affecting the marine environment at and in the vicinity of the proposed activity. Parameters of the marine environment which may influence recreational, commercial, or industrial activities which are dependent on the marine environment are also considered where applicable.

The Virginia Institute of Marine Science (VIMS) is aware that regulatory or administrative bodies who weigh the overall potential public and private benefits and detriments in arriving at decisions must also consider other factors such as economics, aesthetics, zoning, or community desires.

Comments:

We have reviewed this proposal from a marine environmental viewpoint and it is our opinion that the individual and cumulative adverse impacts resulting from this activity have been reduced to the extent practicable and will be minimal.

Thomas A. Barnard, Ph.D.
Marine Scientist
Hydrologic units represent smaller, isolated watersheds defined by topography and flow direction. These units can be thought of as insulated ecosystems or landscapes within which resources can be managed at a larger scale. The cumulative impact of a project to resources within a hydrologic unit may be significantly greater than the impact to the larger watershed above.
Permit Site Study Area

Westmoreland County
LOWER POTOMAC RIVER
Hampton Hall Creek

Project site

Lower Potomac River watershed

Tidal Marsh Inventory - TMI
- Arrow Arum-Pickeralweed
- Big Cordgrass
